Q: F# How to make for-loop work for individual pair of item and index? Is there a way in F# to make the following for-loop work in a simple way? Or would a nested for-loop be a better approach to this problem? let mapf (l: float list) = for i = 1 to l.Length do for j = 1 to l.Length do //some code A: It sounds like you're looking to do something like this: let mapf = List.map (fun n -> List.map (fun m -> //some code)) However, I can't see a good reason why you can't just write it like so: let mapf = List.map (fun n -> let l2 = List.map (fun m ->

AlarmDT is a nice app that can monitor and create alarms for your computer. AlarmDT is a nice app that can monitor and create alarms for your computer. Expert Rating 4.5 Good Cost Both the basic and the Professional versions are available for download in the trial mode which can run for 60 minutes. Professional version gives you access to archive log file and backup and restore facility. But we suggest you to purchase the regular version (Professional version has only one limitation it cannot monitor websites. But regular version has all features) it's too expensive. For trial version you can create an alarm using alarm action, set an alarm (using your system time), set a time for your alarm and it will work. User guide is very helpful. AlarmDT is a nice app that can monitor and create alarms for your computer. WatchGuard will compete with several other home security systems including AlarmDT, NetCam, and Ring. It may also be able to achieve good market share if it offers a free trial period for new customers to test its interface or customer support. That said, if the free trial is not offered, it will only be competing with NetCam and Ring's free trials. However, Homey supports Open APIs and features, which will help the developer with the integration of other third-party apps. Simple operation and use We found the application to be simple in operation. It's easy to set up alarms, view the log of created alarms, and program new alarms. When a new notification has been triggered, it appears in the Notification tray. Using the shortcuts on the computer's desktop, you can quickly access each notification directly. Also, there's a link at the bottom right of the application's desktop that you can use to navigate the web site for the home and commercial version of WatchGuard. There, you can click on Support to get to support or click on Sales to be directed to the payment page. If you want to access your log, you can click on Logs. By default, the application provides you with a list of your last 50 alarms and you can scroll down to find them. Time to move on With numerous security systems available for home monitoring, we think it is a wise move for the developers to market WatchGuard as a "home security system for your convenience and security." Their strong points are the lack of a monthly subscription for remote monitoring and
