The Web Archive Downloader provides options to extract a Web Archive from a previously established connection. This is useful for storing and referencing the HTML, Images, and JavaScript which you do not want to lose. In more advanced cases, the archive may also be kept in order to save a more compact copy. The algorithm which this application uses to detect and extract images and JavaScript from a webpage is relatively easy and efficient. You may customize the settings in order to make it extract only larger image files (without images it would not be good enough). The images the application extracts can be saved on your computer or directly opened in your web browser. The Web Archive Downloader interface
