KEYMACRO Description: Write the description AutoMacro Explorer, the premier macro recorder and manager

for Windows! AutoMacro Explorer is designed specifically to be a small, fast, low-memory-footprint application that captures user keystrokes as they happen, and automatically takes actions based on user-defined parameters. Users can run automated macros on any number of documents, servers, mailboxes, or RSS feeds. Keystrokes can be recorded individually, or as a group, and stored in the users preferred format. Macro results can be saved as images or text files and can be shared with others via email, instant message, or RSS. Using a simple interface, users can easily set

macro parameters, define actions based on parameters, and launch macros by choosing from a list of predefined actions. AutoMacro Explorer includes a fully-featured HTML editor, with syntax highlighting, automatic indenting, and other HTML-specific features. When used as a macro recorder, AutoMacro Explorer can provide syntax errors, directly show all HTML elements, and even reveal the element styles applied to the elements. A special tag can be added to any HTML page to allow automated web scraping. For example, if the users wants to scrape a website,

he/she can add the &t=parameter to the URL, where t is the name of the tag. The Macro Explorer will then take care of extracting the content of the tag and using it. It's easy to use. We created this version to have a very small footprint. Digitex Industries Ltd. Digitex

Industries Ltd. is a Japan-based company that was founded in 1995 as a developer of digital video game hardware and software. First known for its line of systems for arcade games, Digitex has expanded its product range to include similar products for the video game console market, as well as networking and non-game products. In 2004, the company sold its arcade product division to Toshiba and merged its software development division with NaturalMotion and Sega. In 2009, Digitex began the transition from arcade machine producer to software

company. The video game console side of the business began shifting its focus away from arcade hardware to the computer game console business, and the development studio was closed. Digitex's own game publishing operations remain active, and the company has also developed and published software titles for the PlayStation 4, the PlayStation Vita, the PlayStation 3, the Wii, and the Wii U. History Digitex was established in January 1995 by Osamu Tanno and Kenichi Nakao. Tanno was the company's president and Nakao its director. The company's name was

inspired by Tanno's hobbies. Digitex's first product was the Strike GB-1000, a card-style arcade game console with an approximate selling price of ¥10,000. At the time of its launch, the unit was the most expensive game console available in Japan. Digitex was mainly known for creating the Strike series arcade game consoles. The Strike GB-1000 was succeeded by the Strike GB-2000, which combined a DVD recorder and arcade game console. The company also designed an arcade game console for arcade game consoles for other companies, including the Dreamcast. The Digitex

Idex, a PC-based arcade game console, was released in 2005, with the company reporting a sales volume of approximately 70,000 units at retail. In April 2006, Digitex's president, Osamu Tanno, was arrested on charges of receiving about US$13,000 in bribes from Sony, Nintendo and Philips. Digitex discontinued the Idex and was forced to seek a buyer for its remaining assets, which were purchased by Tecmo. The company became part of Tecmo's new subsidiary, Tecmo Hōkago, and shifted its focus to arcade machine hardware. The company developed a

smartphone game console, the Digitex M-Digi, which was released in 2007, and a portable game console, the M-Digi Portable, which was released in 2008. In 2008, the Digitex Idex was re-released, now being the company's flagship model. The company's arcade unit, the CoaX, was released in 2009. On July 22, 2009, Digitex announced that it was
