A: SonicTracker HD is a very well-known tracker, and most of its add-ons have also been made by ReFX. There is a free demo available on ReFX's official website. I'm guessing you already have SonicTracker HD and are looking for more/better sounds/effects, which isn't a bad idea at all. But it's up to you if you want to pay for it or not, you could just search for SonicTracker HD Expansion packs on ReFX's website as well, but it's highly recommended to download the demo first (which you can find in the link I gave you). Hierarchical variability in whole-body tumor volume at relapse predicts outcome after treatment with second-line multiple myeloma therapy. To assess the use of hierarchical variability in whole-body tumor volume (VWTV) for predicting the long-term outcome of patients receiving a second-line treatment in multiple myeloma. All patients (n = 83) receiving second-line therapy were included. The VWTV of an individual patient was calculated as the sum of all VWTV in all examined body regions, derived from a computed tomography (CT) scan of the patient prior to second-line therapy. A hierarchical linear model was applied to study the influence of baseline VWTV and VWTV at the start of second-line therapy on progression-free survival (PFS) and overall survival (OS). Hierarchical variability in VWTV was observed. The median follow-up for PFS was 25 months (range: 7-60) and for OS 25 months (range: 4-76). In a univariate analysis, VWTV at the start of second-line therapy was an independent predictor of PFS and OS. VWTV at the start of second-line therapy, the type of second-line therapy, and patient age were independent predictors of OS in a multivariate analysis. VWTV at the start of second-line therapy and patient age were independent predictors of OS in a multivariate analysis. VWTV at the start of second-line therapy and patient age were independent predictors of PFS and OS. These findings demonstrate that hierarchical variability in VWTV can 4bc0debe42
